MAS114: Lecture 6

James Cranch

http://cranch.staff.shef.ac.uk/mas114/

2018-2019

We were discussing \forall ("for all...") and \exists ("there exists...").

It's important that you get used to this notation.

It's important that you get used to this notation. This is not because there is anything amazing about it, but because mathematics involves lots of general rules and particular examples: much of the mathematics you do for the next few years will require you to be able to deal with these things.

It's important that you get used to this notation. This is not because there is anything amazing about it, but because mathematics involves lots of general rules and particular examples: much of the mathematics you do for the next few years will require you to be able to deal with these things.

One thing you'll have to get used to is situations with two or three quantifiers.

It's important that you get used to this notation. This is not because there is anything amazing about it, but because mathematics involves lots of general rules and particular examples: much of the mathematics you do for the next few years will require you to be able to deal with these things. One thing you'll have to get used to is situations with two or three quantifiers. These happen very frequently: "in general, there is

always a particular example of such-and-such"

It's important that you get used to this notation. This is not because there is anything amazing about it, but because mathematics involves lots of general rules and particular examples: much of the mathematics you do for the next few years will require you to be able to deal with these things. One thing you'll have to get used to is situations with two or three quantifiers. These happen very frequently: "in general, there is

always a particular example of such-and-such", or "there is a particular amazing example which has the general property of such-and-such".

It's important that you get used to this notation. This is not because there is anything amazing about it, but because mathematics involves lots of general rules and particular examples: much of the mathematics you do for the next few years will require you to be able to deal with these things.

One thing you'll have to get used to is situations with two or three quantifiers. These happen very frequently: "in general, there is always a particular example of such-and-such", or "there is a particular amazing example which has the general property of such-and-such".

For example, the statement

$$\forall n \in \mathbb{N}, \quad \exists x \in \mathbb{R} \quad \text{s.t.} \quad x^2 = n$$

says that every natural number n has a square root x.

▲□▶ ▲□▶ ▲目▶ ▲目▶ 目 のへの

Remark

The order of quantifiers is very important. If we swap over the two quantifiers in the last example, we get

$$\exists x \in \mathbb{R} \quad \text{s.t.} \quad \forall n \in \mathbb{N}, \quad x^2 = n.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Remark

The order of quantifiers is very important. If we swap over the two quantifiers in the last example, we get

$$\exists x \in \mathbb{R} \quad \text{s.t.} \quad \forall n \in \mathbb{N}, \quad x^2 = n.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

This says that there's a particular number x which has the property that x is the square root of *every natural number*.

Remark

The order of quantifiers is very important. If we swap over the two quantifiers in the last example, we get

$$\exists x \in \mathbb{R} \quad \text{s.t.} \quad \forall n \in \mathbb{N}, \quad x^2 = n.$$

This says that there's a particular number x which has the property that x is the square root of *every natural number*. And that's nonsense.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Perhaps you may want to remember that "negation swaps \forall and $\exists."$

In symbols,

 $\neg (\forall x \in X, P(x))$ is equivalent to $\exists x \in X$ s.t. $\neg P(x)$. $\neg (\exists x \in X$ s.t. P(x)) is equivalent to $\forall x \in X, \neg P(x)$.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Perhaps you may want to remember that "negation swaps \forall and \exists ." But being able to *do it correctly by remembering what's going on* is much more important than remembering a slogan. After a while it should come to seem natural.

In general, if you have a general statement and you don't know if whether it's true or false, then it could either be:

- true, in which case you need to prove it in general (that's a statement with a "∀" in);
- *false*, in which case you need to find a counterexample (that's a statement with a "∃" in).

The beginnings of induction

The beginnings of induction

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

The beginnings of induction

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$
The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

This, of course, is how counting works.

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

This, of course, is how *counting* works.

It turns out that this way of thinking about the integers gives us a very powerful tool for proving things one integer at a time: the *principle of mathematical induction*, usually known to mathematicians simply as *induction*.

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

This, of course, is how *counting* works.

It turns out that this way of thinking about the integers gives us a very powerful tool for proving things one integer at a time: the *principle of mathematical induction*, usually known to mathematicians simply as *induction*. Informally, I like to think of the following example:

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

This, of course, is how *counting* works.

It turns out that this way of thinking about the integers gives us a very powerful tool for proving things one integer at a time: the *principle of mathematical induction*, usually known to mathematicians simply as *induction*. Informally, I like to think of the following example:

If I can reach the bottom (rung number zero?) of a ladder,

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

This, of course, is how *counting* works.

It turns out that this way of thinking about the integers gives us a very powerful tool for proving things one integer at a time: the *principle of mathematical induction*, usually known to mathematicians simply as *induction*. Informally, I like to think of the following example:

If I can reach the bottom (rung number zero?) of a ladder,

and if I'm on any rung I can reach the next rung up,

The most obvious interesting thing about the natural numbers is that it's natural to start listing them, one after the other:

 $\mathbb{N} = \{0, 1, 2, 3, 4, \ldots\}.$

This, of course, is how *counting* works.

It turns out that this way of thinking about the integers gives us a very powerful tool for proving things one integer at a time: the *principle of mathematical induction*, usually known to mathematicians simply as *induction*. Informally, I like to think of the following example:

If I can reach the bottom (rung number zero?) of a ladder,

and if I'm on any rung I can reach the next rung up, then I can reach any rung on the ladder.

Why, for example, can I reach the fourth rung?

(ロ)、(型)、(E)、(E)、 E) の(の)

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

I can reach rung zero;

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;
- Because I can reach rung three, I can reach rung four.

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;
- Because I can reach rung three, I can reach rung four.

The connection with counting is obvious: our proof visibly counts up to four.

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;
- Because I can reach rung three, I can reach rung four.

The connection with counting is obvious: our proof visibly counts up to four.

Writing that out was okay, but you are probably glad I didn't write out a proof that we could reach the hundred and seventy-eighth rung.

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;
- Because I can reach rung three, I can reach rung four.

The connection with counting is obvious: our proof visibly counts up to four.

Writing that out was okay, but you are probably glad I didn't write out a proof that we could reach the hundred and seventy-eighth rung. I suppose that we could do so, writing "and so on" at some point: but that's a little vague

Why, for example, can I reach the fourth rung? One can imagine a detailed proof of this, as follows:

- I can reach rung zero;
- Because I can reach rung zero, I can reach rung one;
- Because I can reach rung one, I can reach rung two;
- Because I can reach rung two, I can reach rung three;
- Because I can reach rung three, I can reach rung four.

The connection with counting is obvious: our proof visibly counts up to four.

Writing that out was okay, but you are probably glad I didn't write out a proof that we could reach the hundred and seventy-eighth rung. I suppose that we could do so, writing "and so on" at some point: but that's a little vague (what about situations where it isn't obvious what "and so on" means)?

It's helpful to have a way which isn't vague.

(ロ)、(型)、(E)、(E)、 E) の(の)

It's helpful to have a way which isn't vague. So here's a formal version:

- (i) the statement P(0) is true, and
- (ii) for all $k \in \mathbb{N}$, if P(k) is true, then P(k+1) is true,

then the statement P(n) is true for all $n \in \mathbb{N}$.

Let P(n) be the statement above for some particular n.

We'll prove many things by induction in this course, but this is one: Proposition

For any natural number n, we have the following formula for the sum of the first n positive integers:

$$1+2+\cdots+(n-1)+n=\frac{n(n+1)}{2}.$$

Let P(n) be the statement above for some particular n. So P(3) is the statement that says $1 + 2 + 3 = 3 \times 4/2$,

We'll prove many things by induction in this course, but this is one: Proposition

For any natural number n, we have the following formula for the sum of the first n positive integers:

$$1+2+\cdots+(n-1)+n=\frac{n(n+1)}{2}.$$

Let P(n) be the statement above for some particular n. So P(3) is the statement that says $1 + 2 + 3 = 3 \times 4/2$, and P(10) is the statement that

$$1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10 = (10 \times 11)/2.$$
An example

We'll prove many things by induction in this course, but this is one: Proposition

For any natural number n, we have the following formula for the sum of the first n positive integers:

$$1+2+\cdots+(n-1)+n=\frac{n(n+1)}{2}.$$

Let P(n) be the statement above for some particular n. So P(3) is the statement that says $1 + 2 + 3 = 3 \times 4/2$, and P(10) is the statement that

$$1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10 = (10 \times 11)/2.$$

Notice that P(n) is not a number, it's a statement.
